-!- SUBCELLULAR LOCATION: Integral membrane protein (Potential).

-!- PTM: THE C-TERMINAL IS CAPABLE OF AUTOPHOSPHORYLATION.

-!- SIMILARITY: Contains 1 histidine kinase domain.

-!- SIMILARITY: Contains 1 PAS (PER-ARNT-SIM) dimerization domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   TIGR; CC2482;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Score

Sequence 760, Application US/10289762
Publication No. US20040006218A1
GENERAL INFORMATION:
APPLICANT: Griffais, R.
TITLE OF INVENTION: Chlamydia pneumoniae genomic sequence and polypeptides, fragments
TITLE OF INVENTION: thereof and uses thereof, in particular for the diagnosis, preve
TITLE OF INVENTION: and treatment of infection
FILE REFERENCE: 9710-003-99
CURRENT APPLICATION NUMBER: US/10/289,762
CURRENT FILING DATE: 2003-03-27
VIMBER OF SEQ ID NO 760
SEQ ID NO 760
SEQ ID NO 760
TYPE: PRT
CORANISM: Chlamydia pneumoniae

                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This sequence represents a cyclic peptide derived from the Staphylococcus aureus AgrD peptide. The invention relates to AgrD derived peptides, a composition containing a peptide and a carrier, and a method for the production of the cyclic peptides. The peptide inhibits the agr response, which is normally associated with the release of virulence factors of staphylococcus aureus. An AgrD peptide is produced by S. aureus that activates the agr response in strains of a single group, but interferes with this response in strains of different groups. The peptides and composition containing them can be used to treat infections by S. aureus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      WPI;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         invention. The present invention also describes a method for treatistaphylococcus aureus infection comprising the administration of a composition comprising (I). (I) has antibacterial activity, and can used as an agr gene response inhibitor. The peptides are useful for treating S. aureus infections.
The present sequence is that of a novel synthetic cyclic peptide of the invention that is capable of inhibiting the agr response of staphylococcus aureus. It is an AgrD-autoinducing peptide, where AgrD is a secreted agr-encoded peptide and where the agr locus controls the synthesis of virulence factor and other extracellular proteins responsible for pathogenicity in S. aureus. Preferred peptides may have the sequence NH2-X(n)-Z-X(y)-COOH, with a cyclic bond between the Z residue and COOH other than a thioester
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Misc-difference
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Synthetic

Blimination of the thiol ester component of the cyclic ring structure can destroy agr response activating activity while preserving and enhancing inhibitory activity. A claimed method of preparing a cyclic peptide involves: assembling a linear peptide chain on to a solid phase resin support; deprotecting the resulting protected assembled peptide; treating the deprotected peptide with neutral buffer for a time sufficient to form the cyclic peptide. The peptide from the support; and recovering the cyclic peptide. The peptide is useful for pacterial interference, especially for the treatment of S. aureus infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Staphylococcus aureus infection; treatment; AgrD; agr response; virulence factor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         bond, where X is an amino acid, an amino acid analogue, a geptidomimetic or non-amide isostere. Z is a synthetic or a biosynthetic amino acid, n is 0-10 and y is 1-10. The cyclic bond is especially a lactam or lactone bond. The thiololactone
          This sequence represents the Staphylococcus aureus AgrDII derived peptide. The invention relates to AgrD derived cyclic peptides, a composition containing a peptide and a carrier, and a method for the production of the cyclic peptides. The peptide inhibits the agr response, which is normally associated with the release of virulence factors of Staphylococcus aureus. An AgrD peptide is produced by S. aureus that activates the agr response in strains of a single group, but interferes with this response in strains of different groups. The peptides and composition containing them can be used to treat infections by S. aureus.
                                                                                                                                                                                                                                                                                                                                       (UYRQ )
                                                                                                                                                                                                                                                                                                                                                                                                                                                          29-DEC-1999

                                                                                                                                                                                                                                                                                                                                                                                                                                   This sequence represents the Staphylococcus aureus AgrDII derived peptide. The invention relates to AgrD derived cyclic peptides, a composition containing a peptide and a carrier, and a method for the production of the cyclic peptides. The peptide inhibits the agr response, which is normally associated with the release of virulence factors of Staphylococcus aureus. An AgrD peptide is produced by S. aureus that activates the agr response in strains of a single group, but interferes with this response in strains of different groups. The peptides and composition containing them can be used to treat infections by S. aureus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Staphylococcus aureus infection; AgrD; agr response; treatment; virulence factor.

The present sequence is that of a protected peptide used in an example of the preparation of novel synthetic cyclic peptides of the invention (see AAM50899-906). The peptide corresponds to the Staphylococcus aureus AgrOII sequence with a Cys5 to Ser mutation (lactone). It was synthesised on a Wang-reain using an Fmoc N-alpha protection strategy. Following chain assembly, the peptide was cleaved from the support and the Ser-5 residue deprotected by treatment with a trifluoroacetic acid:misole:water mixture (90:5:5) for 4 hr. The partially protected peptide-alpha (90:5:5) for a transparent of dimethylaminopyridine. Cyclization was complete after 2 hr. The remaining protecting groups were then removed by treatment with HF and the peptide gurified by HPIC. The cyclic peptide is capable of inhibiting the agr response of Staphylococcus aureus. The thiolactone structure within native AgrD peptides is required for activation of this response. Replacement of the thiol ester component of the cyclic ring structure with a lactone (as in the present case) or a lactam can constructing inhibitory activity. The cyclic peptides are useful for infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Staphylococcus antibacterial;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  á
                                                                                    thioster peptide. The peptide is derived from the cyclic AgrD2 linear thioster peptide. The peptide is derived from the cyclic AgrD2 agr-encoded peptide, where the agr locus controls the synthesis of virulence factor and other extracellular proteins responsible for pathogenicity in S. aureus. The biological activity of the synthetic peptide was assayed using cultured S. aureus strains containing a beta-lactamase reporter gene fused to the agrP3 containing a beta-lactamase reporter gene fused to the agrP3 response to be monitored spectrophotometrically. Unlike an AgrD2 thiololactone cyclic peptide (see AAMS1001), the present peptide was unable to either activate or inhibit the agr response to be dither activate or inhibit the agr response to be dither activate or inhibit the agr response to be dither activate or inhibit the agr response to be dither activate or inhibit the agr response, even when added to cultured cells at um concentrations. The invention when added to cultured cells at um concentrations. The invention and methods for preparing them. The cyclic peptides are useful for infection interference, especially for the treatment of S. aureus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        08-MAY-2002

                                                                                                                                                                                                                                                                                                        The present sequence is that of a novel synthetic AgrD2 linear (free acid peptide. The peptide is derived from the cyclic AgrD2 peptide of Staphylococcus aureus group II. AgrD2 is a secreted green secreted agr-encoded peptide, where the agr locus controls the synthesis of virulence factor and other extracellular proteins responsible for pathogenicity in S. aureus. The biological activity of the grantost peptide was assayed using cultured S. aureus strains containing a beta-lactamase reporter gene fused to the agr3 promoter. This allowed activation or inhibition of the agr response to be monitored spectrophotometrically. Unlike an AgrD2 thiololactone cyclic peptide (see AM/5101), the present peptide was unable to either activate or inhibit the agr response, even when added to cultured calls at um concentrations. The invention provides claimed cyclic peptides (see AM/50899-906 and AM/5099) and methods for preparing them. The cyclic peptides are useful for infection interference, especially for the treatment of S. aureus

                                                                                                   The present sequence is that of a novel synthetic AgrD2
lactone cyclic peptide in which residue 5 of the peptide is
linked to residue 9 via a lactone bond. The peptide is derived
from an AgrD2 peptide of Staphylococcus aureus group II. AgrD2 is
a secreted agr-encoded peptide, where the agr locus controls the
synthesis of virulence factor and other extracellular proteins
responsible for pathogenicity in S. aureus. The biological
activity of the synthetic peptide was assayed using cultured S.
aureus strains containing a beta-lactamase reporter gene fused to
the agrP3 promoter. This allowed activation or inhibition of the
agr response to be monitored spectrophotometrically. The lactone
AgrD2 peptide inhibited the agr response of group I S. aureus
strains without activating the agr response in group; I, II or III
c strains. The invention provides claimed cyclic peptides (see
AMS0899-906 and AAMS0999) and methods for preparing them,
especially peptides where the cyclic bond is a lactam or lactone
bond. The cyclic peptides are useful for bacterial interference,
especially for the treatment of S. aureus infection.

                                                                                                                                                                                                                                                                                                                                         The invention relates to the use of autoinducer-2 (AI-2) agonists or antagonists for regulating activity of autoinducer-2 receptor, regulating bacterial growth and pathogenesis. Synergistic antibiotic compositions comprising inhibitors of the quorum-sensing pathway of a microorganism are also provided. Methods using such AI-2 analogues are useful for treating pathogen-associated disease states. The compounds and antibiotic compositions can be used to inhibit bacterial cell growth and/or biofilm formation on a medical device, particularly for promoting growth of skin graft replacements used in the treatment of burns and ulcers. They may also be used to aid wound repair, and to inhibit bacterial cell growth and biofilm formation in or on products or devices used for personal hygiene. The present sequence represents a inhibitor of peptide-mediated morrom sensing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Use of autoinducer-2 agonists or antagonists autoinducer-2 receptor, regulating bacterial also antibiotic compositions -

The invention relates to AgrD derived peptides, a composition containing a peptide and a carrier, and a method for the production of the cyclic peptides. The peptide inhibits the agr response, which is normally associated with the release of virulence factors of Staphylococcus aureus. An AgrD peptide is produced by S. aureus that activates the agr response in strains of a single group, but interferes with this response in strains of different groups. The peptides and composition containing them can be used to treat infections by S. aureus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     WPI;

The invention relates to AgrD derived cyclic peptides, a composition containing a peptide and a carrier, and a method for the production of the cyclic peptides. The peptide inhibits the agr response, which is normally associated with the release of virulence factors of Staphylococcus aureus. An AgrD peptide is produced by S. aureus that activates the agr response in strains of a single group, but interferes with this response in strains of different groups. The peptides and composition containing them can be used to treat infections by S. aureus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               WPI;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Muir

The present invention also describes a method for treatistaphylococcus aureus infection comprising the administration of a composition comprising (I). (I) has antibacterial activity, and can useful as an agreement response inhibitor. The peptides are useful for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AgrD is a secreted agr-encoded peptide and where the agr locus controls the synthesis of virulence factor and other extracellular proteins responsible for pathogenicity in S. aureus. Preferred peptides may have the sequence NH2-X(n)-Z-X(y)-COOH, with a cyclic bond between the Z residue and COOH other than a thioseter bond, where X is an amino acid, an amino acid analogue, a peptidomimetic or non-amide isostere, Z is a synthetic or a biosynthetic amino acid, n is 0-10 and y is 1-10. The cyclic bond is especially a lactame or lactone bond. The thiololactone structure within native AgrD peptides is required for activation of the agr response. Elimination of the thiololactone of the agr response. Elimination of the thiololactone of the agr response. Elimination of the thiololactone che cyclic ring structure can destroy agr response activating a ctivity while preserving and enhancing inhibitory activity. A claimed method of preparing a cyclic peptide involves: assembling calinear peptide chain on to a solid phase resin support, deprotected peptide with neutral buffer for a time sufficient to component the cyclic peptide with neutral buffer for a time sufficient to and recovering the cyclic peptide. The peptide is useful for infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

The present sequence is that of a protected peptide used in an according to the preparation of novel synthetic cyclic peptides of the invention (see AAMS0899-906). The peptide corresponds to the Staphylococcus aureus AgrDII sequence with a Cys5 to diaminopropionic control (Dpr) mutation (lactam). It was synthesised on a Wang-resin cusing an Fmoc N-alpha protection strategy. Following chain assembly, the peptide was cleaved from the support and the Dpr-5 residue deprotected by treatment with a trifluoroacetic acid:anisole:water culture (90:5:5) for 4 hr. The partially protected peptide-alpha carboxylates were then dissolved in DMF and treated with PyBOP. Cyclization was complete after 2 hr. The remaining protecting groups cover removed by treatment with HF and the peptide purified by HDLC. The cyclic peptide is capable of inhibiting the agr response of Staphylococcus aureus. The thiolactone structure within native AgrD peptides is required for activation of this response. Replacement of the thiol ester component of the cyclic ring cstructure with a lactam (as in the present case) or a lactome can control of the treatment of the peptides are useful for enhancing inhibitory activity. The cyclic peptides are useful for lactorial interference, especially for the treatment of S. aureus
